### FC095 - To consider the replacement of three bins on Cuckfield High Street

#### 1. Introduction

The committee agreed at the last Full Council meeting that we would investigate the replacement of certain bins located on Cuckfield High Street and the costs to replace these bins. I was charged with identifying the bins to be replaced and obtaining quotes.

#### 2. Approach

After receiving the go ahead from the Waste Contracts Monitoring Officer, I identified three litter bins to be replaced. One outside the Queen's Hall, one just below the roundabout by Broad Street on the left-hand side of the High Street, and one at the bottom of Church Street right by the entrance to the cemetery.

The requirements are as follow:

- the bins should be freestanding with a hood
- the bins should have a capacity of at least 90-100 litres and have a bin liner
- the bins should be able to be ground mounted with ground fixing bolts and with an anti-vandal design (they can have a lock and key if required)
- the bins should be black to be in keep with the other bins located in the same area

The only request from the Waste Contracts Monitoring Officer is to provide them with a copy of the key if we chose to have the lock and key system on the bins.

#### 3. Costs

The following quotes were obtained:

#### 4. Recommendations

Based on the requirements and budget available I would recommend ordering The Eco Recycled Hooded Top Litter Bin from the Bin Shop. This is also a premium bin manufactured from 100% recycled plastic polyethylene. This is one of the first bins to combine an environmentally-friendly manufacturing process with a classic Victoriana style design to suit our streets.
